

Bremicker Verkehrstechnik expands export First projekt in Qatar

Bremicker Verkehrstechnik realized its first project in Doha, Qatar successfully. In cooperation with the local partner company ElectroLink W.L.L Bremicker delivered a valet parking system.

Hamad Hospital, member of Hamad Medical Cooperation, offers valet parking to its visitors. The term „valet parking“ refers to a vehicle being parked for a customer by an attendant. The vehicle and the key are given to a person authorized to accept them at a central location. This person, known as a “valet”, parks the car for its owner.

In order to improve the service for patients and visitors, Hamad Hospital decided to automate the valet parking process with the help of a ticket machine. In cooperation with ElectroLink W.L.L, Bremicker Verkehrstechnik developed a solution especially for Hamad Hospital.

The customer still hands the car keys over to the attendant who drives the car to the car park. The ticket machine issues three tickets at the push of a button: one ticket for the customer, one ticket that is displayed in the vehicle and one ticket for the keys.

When the customer comes to collect the vehicle, his ticket is inserted in the ticket machine. The machine now displays the parking fee which is then printed on a receipt, together with all other important information. Once the payment process has been completed, the vehicle is brought to the customer.

This automated valet parking offers several advantages:

- Superior first-class service by means of a professional tool
- A smooth, service-oriented process
- Transparent charging
- Advertisement or company logos can be included on the parking tickets
